

Tera Dust Control Units

The Dehaco Tera is the champion of dust control. The core objective of the Tera is to produce and distribute a fine layer of water droplets that combine with the dust particles.

The Demto-Rotor® that is used starting from the Tera 15, does away with all the disadvantages of conventional nozzles, such as a clogging due to lime particles in the water.

The Tera dust control units have a wide application. They can be used for small to medium demolition, recycling, construction and renovation activities as well as asbestos removal.

Femto

Renovation? Minor indoor demolition project? Choose the Femto, as it can be easily taken along and moved, thanks to its small dimensions.

Insert the plug in the socket, connect the water and away you go. In short, the Femto is the most practical dust control solution for small areas in and around the house!

The Femto generates a fine spray to which dust particles adhere. It has a maximum range of 10 metres, resulting in a very low water consumption. With the small but powerful Femto you are able to work virtually free from dust when performing small indoor demolition and renovation projects!

		FEMTO	
Range	m	10	
Water consumption	l/h	0 - 20	
Water connection		Gardena®	
Water tank	l	4	
Weight	kg	5	
Power	W	700	
Electrical voltage	V	230	110
Article number		4010.0005	4010.0006

Tera 15

The Tera 15 is quiet, powerful and efficient. Ideal for dust prevention at unloading stations for trucks and during transfer activities on conveyor belts and lanes.

The Tera 15 is made with a Demto-Rotor® and a powerful fan. Its speed can be adjusted in three positions: ECO, ECO BOOST or POWER BOOST. The machine demands little power, at maximum volume flow the consumption is only 350 Watts.

- Lightweight aluminium frame with two carrying handles.
- Powerful Smart Fan.
- Low maintenance Demto-Rotor®.
- Ball valve for controlling the water supply on the machine.
- Low power consumption of only 350 Watts.

Tera 25

The Tera 25 was specially designed for mobile and efficient use. With a 25 metre range, this spray canon is excellent for medium sized indoor and outdoor projects. The cone with guide vanes was specially designed to protect the moving air flow against disruptions, resulting in an optimum air flow.

- Easy to install and commission.
- Low maintenance Demto-Rotor®.
- Ball valve for controlling the water supply on the machine.
- Robust wheels for easy transport over different surfaces.
- Practical frame so that the machine can be easily loaded and unloaded by one person.
- Low power consumption of only 2.2 kW.
